

Syniverse Interconnects Canadian Mobile Operators to Comply with March 14 Number Portability Initiative

Portability Solution Enables Users to Keep Mobile Numbers When Transferring Service

TAMPA, Fla.--(BUSINESS WIRE)--March 14, 2007--Syniverse Technologies (NYSE:SVR) announced today it has successfully implemented its wireless number portability (WNP) clearinghouse solution for all Canadian mobile operators that began providing subscribers with the option to transfer mobile numbers from one service provider to another on March 14.

Available to most Canadian mobile phone users, WNP allows wireless subscribers to keep their same phone number when changing mobile service providers in the same local serving area, as well as when transferring between mobile and traditional landline telephone service.

Syniverse's WNP clearinghouse solution is critical in maintaining an accurate, rapid and seamless number porting process as it handles the exchange of porting messages between the Canadian mobile operators, fixed-line operators and the Number Portability Administration Center.

To ensure smooth service to Canadian users and mobile operators, Syniverse utilized its expertise in number portability to build a sophisticated national network interconnecting different mobile operators' networks, including their various billing or customer service system software.

"Syniverse has a proven track record in designing and implementing complex network solutions," said Tony Holcombe, President and CEO of Syniverse Technologies. "Our number portability clearinghouse solution in Canada is an excellent example of how Syniverse excels in connecting operators and networks around the world and how we are able to make the porting process as simple as possible both for operators and their subscribers."

Syniverse provides number portability solutions to operators around the globe, including most U.S. mobile operators and all mobile network operators in the United Kingdom.

Telcordia Technologies, which brings a wealth of market expertise and a proven track record of delivering highly reliable, scalable number portability solutions to carriers worldwide, is providing its Telcordia(R) Service Management Gateway for Wireless Number Portability to Syniverse as a key enabling system for the deployment.

"Canada is one of the world's most successful wireless markets, with more than 18.5 million subscribers," said Richard Jacowleff, President, Interconnection Solutions, Telcordia. "We are pleased that Canada's leading wireless carriers see Syniverse and Telcordia as key in continuing that success through wireless number portability and the benefits it brings to the country's mobile subscribers."

Syniverse along with Telcordia will enable WNP for 10 wireless operators across Canada: Bell Mobility (including wireless services offered by Aliant in Atlantic Canada), Fido, MTS Allstream Inc., NorthernTel, Rogers Wireless, SaskTel, TBayTel, Telebec and TELUS.

About Syniverse

Syniverse Technologies (NYSE:SVR) solutions allow more than 350 communications companies in over 50 countries to provide seamless mobile services by making it possible for disparate technologies and standards to interoperate. Syniverse's flexibility and customer focus permit its customers to quickly react to market changes and demands, enabling the delivery of everything

from voice calls to sophisticated data and video services wherever and whenever subscribers need them.
