

SaskTel solutions for the Mining Industry

To ensure your mining business is running productively, safely, and efficiently you need an IT infrastructure that can support multiple applications, and a means of communicating with your employees both on the surface and below the ground.

SaskTel can help you meet these challenges with Professional Services, Structured Cabling, Virtual Private Servers, and Guest Support.

SaskTel Professional Services

SaskTel Professional Services will help set your business up for success. With more than 20 years of experience designing, implementing, and maintaining voice and data networks for Small, Medium, and Enterprise sized businesses, our expertise allows you to protect, optimize, and grow your network platforms to create business value and operational excellence within your organization.

Wireless Site Surveys

A Wireless Local Area Network (WLAN) can vastly improve the efficiency, flexibility, and accessibility of your business, allowing your employees to communicate easily on the surface and underground at all times.

Before WLAN installation begins, a Wireless Site Survey must be performed to ensure that you receive the best possible level of reliable wireless coverage within your WLAN.

Using industry-leading tools, SaskTel Customer Service Analysts perform a thorough assessment and complete survey of your premise to determine the best wireless solution for your business.

Once the site survey is complete, SaskTel Design Specialists study the data and create a detailed report outlining the design, equipment, and installation of your customized WLAN.

Complete Network Discovery and Assessment

A Complete Network Discovery and Assessment from SaskTel will offer you an unbiased evaluation of your network to identify potential problems, improve efficiency, and lay out the possibilities of new accelerated applications.

A small investment in Complete Network Discovery and Assessment can yield sizable future returns in improving performance and reducing troubleshooting.

Experience a Complete Network Discovery and Assessment in the SaskTel Demo Lab

Visit the SaskTel demo lab in Saskatoon for a free demonstration to help understand the steps, tools, and value of a Complete Network Discovery and Assessment. Experience a realistic simulation using the same tools that are used on site. Let us show you how a Complete Network Discovery and Assessment can benefit your business.

SaskTel Project Management Service

SaskTel Project Management service will save time on your project by providing project planning and creating a road map that will lead to your project completion.

With a Customer Satisfaction rating of 88% on customer projects, you can be confident that SaskTel Project Managers bring a wealth of knowledge and experience to your project, ensuring that your business objectives are achieved through the delivery of projects within time, budget, quality, and scope.

SaskTel Structured Cabling

Mining operations require efficient and reliable mine-wide communication systems to maintain smooth operations and safeguard miners. SaskTel has industry trained technicians who are certified to install a wiring system tailored to the needs of your industrial environment. Our properly designed cabling systems provide you with a network infrastructure that delivers predictable performance with flexibility.

With more than 80 years experience in design, installation, and maintenance of cabling systems SaskTel cabling solutions will meet the challenges of your network today and into the future.

SaskTel Virtual Private Servers

A more cost effective solution to dedicated servers is server virtualization using SaskTel Virtual Private Servers. SaskTel Virtual Private Servers allow you to optimize your server usage by creating multiple virtual machines from one physical server.

Maintain your own private and secure virtual environment housed in the SaskTel world class, state-of-the-art Data Centre. The infrastructure costs are carefully managed by SaskTel so you only pay for what you need.

SaskTel Guest Support Services

With Guest Support service from SaskTel, your employees receive full support for your wired and wireless internet from our highly trained and friendly experts. Guest Support service allows your employees to resolve connection issues quickly and easily, freeing your staff to focus on other important tasks.

SaskTel Guest Support offers high quality support based on the professional design and installation of your Local Area Network (LAN) and allows for:

- Virtual Private Networks
- Isolated Access Points that prevent guests' laptops from being wirelessly accessed by others
- Dynamic Address Translation for dynamic or static IP addresses
- Bandwidth limitations per guest
- Optional user name and password security
- A home page customized for your company

At SaskTel, we're the Experts in our business so that you can be the Expert in yours.
