

SaskTel PC Data Backup Service

Be prepared: protect your data before it's too late.

Protect your system against hard drive crashes, power failures, unintended deletions and theft. SaskTel PC Data Backup Service is a fast, affordable way to backup data on personal computers. For businesses that have no backup system or don't want to use traditional in-house backup methods such as CDs and floppy disks, SaskTel PC Data Backup Service is the perfect solution. Best of all, you'll never have to worry about losing valuable data, as your data is stored off-site at multiple data centres.

Secure and Stabilize Your Data

SaskTel PC Data Backup Service provides complete protection against lost data. Your data is automatically compressed and secured with Data Encryption Standard (DES) and is stored in multiple secure data centres. Patented data reduction technology significantly reduces the bandwidth needed to protect your computers from viruses, hackers, hard-drive crashes, unintentional deletions and more. Establish, track and measure service level performance with an average 99.99% service level.

Easily Accessible

SaskTel PC Data Backup Service lets you access the last nine versions of deleted, edited or lost files. Retrievals can be traced to a certain date, time or file location, eliminating data loss. If you are away from the office, simply log on to a web-browser to access your files.

Save Money

SaskTel PC Data Backup Service provides the latest hardware and software for an affordable flat monthly fee. It lowers your capital investment and reduces employee and storage costs.

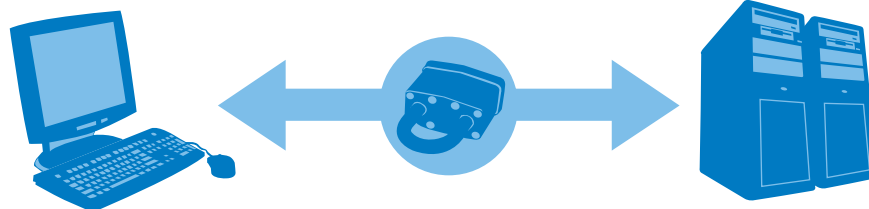

Save Time

SaskTel PC Data Backup Service backs up your data automatically, freeing up employee time and improving business productivity. Your data is accessible anytime and anywhere so more time can be spent focusing on your business needs.

Heal					*	*

MyRoam: Lets you use any web browser to access files from a client's office, your home PC or on the road.

Auto Scheduler: Allows you to determine when and how often your automatic backups will occur.

Delta Block: File comparison technology backs up only the portions of a file that have changed, reducing backup time.

Send Once: Stores a single copy of a file that is common to multiple users, increasing operation speed and reducing network load.

Heal: Users and IT staff can restore systems and configurations online to any previous point, improving your productivity and reducing support needs.

SaskTel PC Data Backup Service is for PC (not network) disk drives, for both home and office computers. It is not for servers or PCs used extensively for multimedia files such as MP3s and digital photos.
